Pune, Maharashtra | +91-9558628663 | yugsharma4499@gmail.com | linkedin.com/in/yug-sharma

Backend Engineer with 5 years building production-grade systems in Java and Node.js. Specialized in microservices, Kafka-driven event streaming, distributed caching, and ACID-compliant transactional workflows across Spring Boot and Express.js stacks. Proven record of owning complex backend systems end-to-end, driving performance optimization, and mentoring engineers.

TECHNICAL SKILLS

Languages: Java 8/11+, JavaScript (ES6+), SQL

Frameworks & Runtime: Spring Boot, Spring MVC, Spring Security (JWT) · Node.js, Express.js

Databases & Messaging: MongoDB (Transactions, Aggregation Pipelines, Compound Indexing), MySQL, MSSQL, Redis (Cache · Pub/Sub · Distributed Locks), Apache Kafka (Topics, Consumer Groups, Partitions), RabbitMQ

Cloud & DevOps: AWS (EC2, S3, SQS) · Docker · Maven · PM2 · Nginx · GitHub Actions CI/CD

Architecture & Patterns: Microservices · Event-Driven · REST APIs · Dependency Injection/IOC · SOLID · CQRS · Saga · State Machine · Repository

Testing & Tools: Jest · Supertest · JUnit · Swagger/OpenAPI · Postman · Git · Jira · IntelliJ IDEA

EXPERIENCE

Lifemaan — Senior Software Developer

Nov 2024 – Present · Surat, Gujarat

- Architected pharmacy management as a domain-isolated microservice (dedicated MongoDB instance, independent auth middleware, API contract boundaries, DRAFT→CONFIRM billing state machine); delivered 15+ production APIs across the purchase-to-sale pipeline (procurement, stock, billing, returns, reconciliation), cutting billing discrepancies by 40%.
- Designed a Kafka-based event-streaming pipeline for real-time prescription-to-pharmacy order flow; used consumer groups with partition-level parallelism for ordered per-branch processing, eliminating synchronous cross-service coupling and enabling async stock validation and order creation.
- Drove performance engineering across the stack: Redis cache-aside with TTL invalidation for drug-catalog lookups (~40% fewer DB reads), distributed Redis locks preventing concurrent billing conflicts, and compound indexing tuned via MongoDB explain() plans reducing reporting latency ~45%.
- Built the OPD 2.0 dynamic clinical form engine with an iterative sub-field discovery algorithm supporting arbitrary nesting; executed a drug-master unification migrating 70,000+ records with _id preservation into a 200,000-record single source of truth; shipped a 31-flag feature-flag system (GLOBAL/ALLOWLIST) enabling zero-deployment rollouts.
- Enforced ACID consistency via MongoDB multi-document transactions across 6 financial controllers; offloaded PDF generation and WhatsApp dispatch to Redis-backed job queues with dead-letter and exponential-backoff retry for zero message loss; authored 50+ idempotent migration scripts with dry-run support for zero-downtime schema evolution on million-record collections.
- Mentored 2 junior engineers (API contracts, code reviews) cutting PR iteration cycles ~30%; deployed via PM2 cluster + Nginx with GitHub Actions CI/CD catching ~15% of regressions pre-merge; automated 7 clinical workflows via cron jobs, reducing manual overhead ~35%.

MWB Technologies — Software Developer

Mar 2023 – Nov 2024 · Hubballi, Karnataka

- Directed Node.js backend development across 3 projects (Tirth, Master Portal, Easy Stock), architecting efficient database schemas and optimizing data pipelines for a 35% gain in system performance.
- Integrated subscription and wallet APIs powering core company revenue; wrote complex SQL stored procedures and MongoDB aggregation queries driving analytics and reporting dashboards.
- Automated notification workflows via Node.js cron jobs and delivered revenue-analysis features for Master Portal, improving operational efficiency ~25%.

Tata Consultancy Services — Assistant System Engineer

May 2021 – Sep 2022 · Gandhinagar, Gujarat

- Managed the SAP Portal lifecycle for a banking client (technical specs, coding, system integration testing); coordinated production go-live with the AWS team across distributed teams.
- Strengthened application security by integrating two-factor authentication; built reusable React components and applied memoization to reduce load times ~20%.

EDUCATION

Bachelor of Technology in Engineering

May 2021

Birla Vishvakarma Mahavidyalaya, Anand, Gujarat · CGPA: 8.8
